

Educator Training on Climate Change: Science, Action and Engagement!

Climate Change: Global Connections and Sustainable Solutions

This 6 hour workshop, facilitated by **Amanda Patrick** with the U.S. Fish and Wildlife Service and Facing the Future (<http://www.facingthefuture.org/>), is designed for 6-10th grade educators (but others are welcome) who are interested in building in science, social studies, math, and governance lessons about climate change into their classrooms. This workshop will teach you ways to engage students in understanding climate change from multiple perspectives and empower them to create their own solutions. This session will also provide hands-on, interactive lessons for teachers to take part in and learn the science teaching skills and content knowledge necessary to teach about climate change and its interconnections to the environment, society, and the economy.
